 - D. Monthly
-

15. Physicians must have a board certification in addiction medicine or addiction psychiatry to prescribe naltrexone?

- A. True
 - B. False
-

16. Methadone is an opioid antagonist.

- A. True
 - B. False
-

17. Which of the following statements regarding extended-release injectable naltrexone is most accurate?

- A. The clinical use of extended-release injectable naltrexone is for detoxification.
 - B. The clinical use of extended-release injectable naltrexone is for the prevention of relapse to opioid use disorders following opioid detoxification.
 - C. The clinical use of extended-release injectable naltrexone is for the prevention of relapse to opioid use disorders before opioid detoxification.
 - D. The clinical use of extended-release injectable naltrexone is for the treatment of opioid use disorders.
-

18. Buprenorphine should be part of a comprehensive management program that includes psychosocial support.

- A. True
 - B. False
-

19. Buprenorphine is ordered for a patient. Upon examination, the patient reports being hypersensitive to naloxone. Which of the following recommendations should be made regarding buprenorphine?

- A. Administer buprenorphine as ordered.
 - B. Administer buprenorphine with methadone.
 - C. Use caution - however, the patient does not require monitoring.
 - D. Discontinue the buprenorphine.
-

20. A 30-year-old female patient is scheduled to receive extended-release injectable naltrexone. Upon examination, the patient reports she is currently using opioids. Which of the following recommendations should be made regarding the extended-release injectable naltrexone?

- A. The extended-release injectable naltrexone should be given as scheduled.
 - B. The extended-release injectable naltrexone should be given as scheduled- however, it should be administered with methadone.
 - C. The extended-release injectable naltrexone should be given as scheduled- however, it should be administered with buprenorphine.
 - D. The extended-release injectable naltrexone should not be given while the patient is concurrently using opioids.
-

21. A female patient is currently receiving extended-release injectable naltrexone. Upon a recent exam, the patient reported experiencing several signs and symptoms of acute hepatitis. Which of the following recommendations should be made regarding the extended-release injectable naltrexone?

- A. Monitor the patient for 12 hours.
 - B. Continue the extended-release injectable naltrexone.
 - C. Hold one dose of the extended-release injectable naltrexone.
 - D. Discontinue the extended-release injectable naltrexone.
-

22. Oral methadone is ordered for a female patient. The patient is currently suffering from hypercarbia. Which of the following recommendations should be made regarding the oral methadone?

- A. Administer with caution; monitor patient for 12 hours.
 - B. Administer methadone with extended-release injectable naltrexone.
 - C. Hold one dose of oral methadone.
 - D. Discontinue methadone due to contraindication.
-

23. Extended-release injectable naltrexone is ordered for a 32-year-old female patient with thrombocytopenia. Which of the following recommendations should be made regarding the extended-release injectable naltrexone?

- A. Discontinue the extended-release injectable naltrexone.

- B. Administer the extended-release injectable naltrexone with methadone.
 - C. Administer with caution; monitor patient for 12 hours.
 - D. Administer with caution; monitor patient for 24 hours.
-

24. Which of the following statements is most accurate?

- A. Patients may become sensitive to higher doses of opioids after treatment with extended-release injectable naltrexone.
 - B. Patients may become sensitive to lower doses of opioids after treatment with extended-release injectable naltrexone.
 - C. Patients may become tolerant to lower doses of opioids after treatment with extended-release injectable naltrexone.
 - D. Patients may become tolerant to higher doses of opioids after treatment with extended-release injectable naltrexone.
-

25. A 26-year-old female patient has several questions regarding the potential complications of extended-release injectable naltrexone. Which of the following counseling points should be included in the health care professional's response to the patient's questions?

- A. An overdose may not result from trying to overcome the opioid blockade effects of naltrexone.
 - B. An overdose may result from trying to overcome the opioid blockade effects of naltrexone.
 - C. Naltrexone can be taken concurrently with long-term opioid therapy.
 - D. One dose of naltrexone should be held every week if taken concurrently with long-term opioid therapy.
-

26. Buprenorphine includes a warning about somnolence that may preclude driving or operating equipment.

- A. True
 - B. False
-

27. Buprenorphine falls in which of the following FDA pregnancy categories?

- A. FDA pregnancy category A
 - B. FDA pregnancy category B
 - C. FDA pregnancy category C
 - D. FDA pregnancy category D
-

28. Mothers maintained on methadone can breastfeed if they are not abusing substances.

- A. True
 - B. False
-

29. Buprenorphine does not possess any potential for abuse.

- A. True
 - B. False
-

30. Collaborative practice can be defined as the use of 10 system linkage elements by two or more systems, agencies, or providers to improve child and family outcomes.

- A. True
 - B. False
-
